Gen AI for Gen Z

Hello Meet Arvindbhai Shingala,

We have just completed a review of the current project submissions for [Challenge 2 in the portal](#), and we need to have a serious conversation about the standard of work being produced.

Currently, **less than 10% of the submissions qualify** to move forward.

1. Many submissions are relying far too heavily on raw LLM outputs without actual engineering. Remember, your goal is to use LLMs to help you *learn* and understand, not to copy-paste your way through the challenge.
2. Several submissions contain documentation but **no actual code**. A repository without a working implementation is not a valid submission.
3. Because we lack enough high-quality submissions to proceed with the next phase of the curriculum, **we are delaying Session 3 to give you time to fix your work**.
4. If the quality remains at this level, **we will only invite the qualifying 10% to the final session 3 next week**.

How to Fix Your Submission

- **Put in the Work:** Go back to your GitHub repo. Ensure there is a functional Python implementation
- **Build in Public:** Share your work on LinkedIn. In the open-source community, developers use these posts to elevate their work and get eyes on their code.

- Deadline for Submission of Challenge 2: 20th Feb

Please note that Session 3 is now shifted to 21st Feb at 10:30 AM

Regards,

Team Gen AI for Gen Z
